

3⁵. (Amended) 35. A golf shoe cleat comprising a main body member having a dome-shaped outer face and a planar inner face, a shoe attaching member projecting outwardly from said inner face having an axis AL perpendicular to said planar inner face and adapted to secure said cleat in a receptacle in said golf shoe upon rotation of said shoe mounting member in said receptacle,

an annular anti-debris ring formed on the edge of said planar inner face,

a plurality of shaped traction teeth projecting in a circular array around the perimeter of said main body member, each traction tooth being spaced from said axis AL and having an axis ALT and an outer traction surface facing away from said axis AL, each said outer axis ALT and traction surface having an outward angulation relative to said axis AL to provide lateral stability and traction through the plane of a golf swing.

4⁹. (Twice Amended) A golf shoe cleat comprising a main body member having an inner face and an outer face, a shoe-attaching member projecting perpendicularly outwardly from said inner face and said shoe-attaching member having an axis AL and adapted to secure said cleat in a receptacle in said golf shoe upon rotation of said shoe mounting member in said receptacle,

a plurality of low-profile traction teeth projecting around the perimeter of the outer face of said main body member in a
